For small steps, for big steps, for life

Want to know more about your community?

We're encouraging local businesses and communities to make new connections. Our aim is to help people grow their local economies while helping to foster a renewed sense of purpose and identity for the whole community. The Enterprise Town initiative has grown from one town to over 50 in just three years and we continue to develop it further by rolling it out to more towns in 2017. In every town we reach, local people tell us it provides a spark that is igniting further action in the community.

The Business & Community Expo

brings together local small and medium enterprises to showcase their businesses and to network with each other. Students from local schools participate, while seminars and advice clinics are given by a number of keynote speakers.

The Sports & Community Expo

is a family fun day bringing together local sports and community groups to celebrate their achievements and also includes guest appearances from some local and national sporting heroes.

We invite everyone to come along to these free events!

97%

strongly agreed that it's good for local networking

89%

of people said they discovered local businesses they didn't know existed

94%

strongly agreed that it's a good opportunity to showcase businesses, charities, local sport and community organisations
